

A list of all abbreviations and terms appearing in this issue of *Therapy*

|                  |                                             |               |                                                                                      |
|------------------|---------------------------------------------|---------------|--------------------------------------------------------------------------------------|
| 3TC              | Lamivudine                                  | IFN- $\gamma$ | Interferon- $\gamma$                                                                 |
| 5ARI             | 5 -reductase inhibitor                      | IgG           | Immunoglobulin G                                                                     |
| ABC              | Abacavir                                    | im.           | Intramuscular                                                                        |
| ACS              | Acute coronary syndrome                     | INR           | International Normalized Ratio                                                       |
| ADEM             | Acute disseminated encephalomyelitis        | IPSS          | International Prostate Symptom Score                                                 |
| AF               | Atrial fibrillation                         | iv.           | Intravenous                                                                          |
| ALT              | Aminotransferase                            | LFT           | Liver function test                                                                  |
| ANA              | Antinuclear antibody                        | LPV/r         | Lopinavir/ritonavir                                                                  |
| ANOVA            | Analysis of variance                        | LUTS          | Lower urinary tract symptom                                                          |
| API              | Active pharmaceutical ingredient            | MOG           | Myelin oligodendrocyte glycoprotein                                                  |
| aPTT             | Activated partial thromboplastin time       | MS            | Multiple sclerosis                                                                   |
| ARR              | Annualized relapse rate                     | MSFC          | Multiple Sclerosis Functional Composite                                              |
| ARV              | Antiretroviral drug                         | N/M           | Not measured                                                                         |
| AUC              | Area under the plasma concentration curve   | NACO          | National AIDS Control Organization                                                   |
| AVP              | 8-arginine vasopressin                      | NC            | Normal control                                                                       |
| AZT              | Zidovudine                                  | NEPAD         | New Partnership for Africa's Development                                             |
| b.i.d.           | Twice-daily                                 | NK            | Natural killer                                                                       |
| BFLUTS           | Bristol female LUTS                         | NMO           | Neuromyelitis optica                                                                 |
| BISTRO I         | Boehringer Ingelheim Study in Thrombosis    | NMSS          | National Multiple Sclerosis Society                                                  |
| BPO              | Benign prostatic obstruction                | NVP           | Nevirapine                                                                           |
| CADASIL          | Cerebral autosomal dominant arteriopathy    | o.d.          | Once-daily                                                                           |
| CBC              | Complete blood cell count                   | OAB           | Overactive bladder                                                                   |
| CHAI             | Clinton Foundation HIV/AIDS Initiative      | OASIS         | Old astrocyte specifically induced substance                                         |
| CIS              | Clinically isolated syndromes               | OD            | Optical density                                                                      |
| CL               | Compulsory license                          | OPC           | Oligodendrocyte progenitor cells                                                     |
| CLCR             | Creatinine clearance                        | OPTION        | Tocilizumab Pivotal Trial in Methotrexate Inadequate Responders                      |
| C <sub>max</sub> | Maximum plasma concentration                | PBS           | Phosphate-buffered saline                                                            |
| CMC              | Carboxymethylcellulose sodium               | PE            | Pulmonary embolism                                                                   |
| CRP              | C-reactive protein                          | PETRO         | Prevention of Embolic and Thrombotic Events in Patients with Persistent AF           |
| CSF              | Cerebrospinal fluid                         | P-gp          | P-glycoprotein                                                                       |
| CSZ              | <i>Cornus officinalis</i> Sieb. et Zucc.    | PML           | Progressive multifocal leukoencephalopathy                                           |
| CV               | Coefficient of variation                    | PMTCT         | Prevention mother-to-child transmission                                              |
| CYP              | Cytochrome P450                             | PPMS          | Primary progressive                                                                  |
| D4T              | Stavudine                                   | PT            | Prothrombin time                                                                     |
| DDAVP            | 1-desamino-8-D-arginine vasopressin acetate | QoL           | Quality of life                                                                      |
| DM               | Diabetes mellitus                           | R             | Response                                                                             |
| DMARD            | Disease-modifying antirheumatic drug        | RA            | Rheumatoid arthritis                                                                 |
| DMT              | Disease-modifying therapy                   | RE-DEEM       | Risk Factors for Cardiovascular Complications Also Receiving Aspirin and Clopidogrel |
| DSMB             | Data safety monitoring board                | RE-LY         | Randomized Evaluation of Long-term anticoagulant therapy                             |
| DTI              | Direct thrombin inhibitor                   | Rf            | Retention factor                                                                     |
| DVT              | Deep-vein thrombosis                        | RRMS          | Relapsing–remitting MS                                                               |
| EAE              | Experimental autoimmune encephalomyelitis   | RSD           | Relative standard deviation                                                          |
| EB               | Ethidium bromide                            | s.c.          | Subcutaneous                                                                         |
| ECOWAS           | Economic Community of West African States   | SAA           | Serum amyloid A                                                                      |
| ECT              | Ecarin clotting time                        | SAMURAI       | Study of Active Controlled Monotherapy for Rheumatoid Arthritis, an IL-6 Inhibitor   |
| EDSS             | Expanded Disability Systems Scale           | SCGE          | Single-cell gel electrophoresis                                                      |
| EFV              | Efavirenz                                   | SE            | Standard error                                                                       |
| ER               | Endoplasmic reticulum                       | SFDA          | State Food and Drug Administration                                                   |
| ERAD             | ER-associated degradation                   | SPMS          | Secondary progressive                                                                |
| ERSR             | ER stress response pathway                  | SR            | Sustained release                                                                    |
| ESR              | Erythrocyte sedimentation rate              | SSRIs         | Selective serotonin reuptake inhibitors                                              |
| FDC              | Fixed-dose combination                      | TDF           | Tenofovir                                                                            |
| FSS              | Fatigue severity scale                      | THR           | Total hip replacement                                                                |
| FTC              | Emtricitabine                               |               |                                                                                      |
| FVC              | Frequency/volume chart                      |               |                                                                                      |
| GA               | Glatiramer acetate                          |               |                                                                                      |
| GPO              | Government Pharmaceutical Organization      |               |                                                                                      |
| ICIQ-N           | Incontinence Questionnaire for Nocturia     |               |                                                                                      |

## GLOSSARY

|       |                                                       |     |                                   |
|-------|-------------------------------------------------------|-----|-----------------------------------|
| TKR   | Total knee replacement                                | USC | University of Southern California |
| TLC   | Thin layer chromatography                             | VKA | Vitamin K antagonist              |
| TRIPS | Trade-Related Aspects of Intellectual Property Rights | VL  | Voluntary license                 |
| TSH   | Thyroid-stimulating hormone                           | VTE | Venous thromboembolism            |
| TT    | Thrombin clotting time                                | WTO | World Trade Organization          |
| UA    | Ursolic acid                                          |     |                                   |
| UPR   | Unfolded protein response                             |     |                                   |
