New journal for the interventional cardiology community

“We are pleased to announce a new journal for the interventional cardiology community. Interventional cardiology is a relatively young field celebrating 32 years of percutaneous revascularization and device, technique and strategy invention to optimize procedures and the care provided to our patients. With passion, innovation and science, the field of interventional cardiology continues to evolve and renew itself. It has adopted evidence-based, data-driven medicine as its beacon; and it is critical that the data generated be brought to press. It is our hope that Interventional Cardiology will serve as a reference point to help our physician colleagues understand the ever-changing concepts, achievements and trial results in this subspecialty.”
