

## Oral Health at various ages

### Abstract

Pediatric Oral Health is one of the key factors for the growth & development of a child since the time of the birth. A compromising state of oral health can hamper the well being of over all physical health, as the growth and development majorly is affected by the nutrition of the child. The oral care and concerns differs at different ages and this is important to be understood. A multidisciplinary approach is the best way to make sure of the right way of child's development. Hence, the role of Pediatricians and Pediatric dentists seem to be dependent on each other knowing or unknowingly. In this webinar, I shall be talking about the different age groups that are affected by various oral habits and situations, and why is it important to rectify and/or prevent those practices.
