Revisting the use of "Rubefacient" in reducing the blood sugar level of people with type II diabetes via Clinical Aromatherapy

Clinical Aromatherapy is still a newly emerge healing/treatment protocol in the medical world, which its scientific bases needs tobeprovenandstudiedtoyieldapopularacceptanceamongthemedicalprofessionals. Theword "Rubefacient" stemsfrom the use of the drug to "produce redness of the skin, e.g. by causing dilation of the capillaries and an increase in blood circulation.

"According to Wikipedia defini8on and there are some topical drugs that can achieve it. In fact , the TCM (Traditional Chinese Medicine) uses of the technique "Gua Sha" can achieve rubefacient effect too. The speech will discuss this technique combining with the use of essential oil massage in treating type II diabetes and how this integrative approach brings down the blood sugar levels to a significant extent that complement well with the conventional drugs in treating the diabetes. Actually, the author made use of this to help one diabetic person to reverse her diabetes and two of them to significant drops of blood sugar level and resolved the severe insomnia issue. Except for the mechanical technique of "Gua Sha", essen8al oil blend that can create "rubefacient" effect is also employed... The formulation and its therapeutic applications will also be discussed. Last but not least, not each part of the whole body deserves the same aNention. There will be discussion on which should go first as this will affect the result, specially when 8me is limited. This presentation not only tells you the facts or evidence but also points to the way that you can improve your formulation to beNer serve your customers.

What will audience learn from your presentation?

- · What composes a practical research that can resolve real life issues
- A win win situation to each party including clients, practitioners, researchers secured the interests of the society and making research grants highly accessible
- Evidence based research is widely applied in many areas of the alternative therapies. A good research must start with

an insight that has practicability and applicability on how to bridge the gap between theory and reality.

attempts to point the way of improvement instead of only telling the audience facts or evidence.

• A good feedback system from the parties involved makes the whole design of research more appealing and realistic.

Fai Chan

Deli Aroma LLC, USA
