Wellness and Stress Management
Rachna K Singh,
Psychology and Holistic Health, Artemis Hospital, India

Abstract:
Aim of work
Description: The concept of wellness or complete wellness refers to a completely well-rounded human being. It is inclusive of a holistic concept comprising of our mind, body, and soul. However, our wellness can be compromised with the patterns of our faulty lifestyle including stress, faulty diets, sedentary life, smoking and alcoholism. In addition, the pressure to perform, factors related to urbanization, our busy schedules and peer pressure seemingly contributes more to our faulty lifestyle patterns.

Consequently, stress has become a normal part of life for most of us owing majorly to these faulty lifestyle habits. But, if left unmanaged, stress can lead to emotional, psychological and even physical problems, including palpitation, high blood pressure, chest pains and even coronary artery disease. Hence it is essential to identify the sources of stress (stressors), types of stress (Eustress and Distress), causal factors, and symptomatology and learn to deal with it effectively before it impacts one’s Heart & Health
